

CMPE 211 - Data Structures and Algorithms

Quiz 2

You are given Stack and DijkstraCalculator code.

1. Make Stack generic, so you can use it to store Strings for operators or Doubles for operands.
2. Add sqrt operation to DijkstraCalculator that takes a double and returns square root of it.
3. Complete the GUI.

Bonus: This program works if you put spaces between numbers and operators. Modify your program so that it will work without spaces.
